## How to remove activation lock on ipod touch 5th gen.  How to bypass activation lock on ipod touch.  How to bypass activation lock on ipod touch 6th gen.  Ipod touch activation lock removal.  Ipod touch 5 icloud bypass.

Dealing with an iPod Touch locked out due to activation lock? You're not alone! Whether you've forgotten your Apple ID password or acquired a used device, there are five reliable methods to bypass this issue and regain access. In this comprehensive guide, we'll walk you through these techniques. **Way 1: iCloud Activation Lock Removal Service** Utilize online platforms that specialize in unlocking iOS devices securely. Here's how: * Visit a reputable service provider * Provide IMEI or serial number information about your iPod Touch * Follow instructions to complete the payment process * Wait for 24-48 hours, and you'll receive confirmation of successful activation lock bypass **Way 2: Contact Apple Support** Reach out to Apple's official support team: * Visit Apple's support website or use the Apple Support app * Initiate a request related to activation lock removal * Provide necessary details about your device and situation * Follow instructions to verify identity and ownership of the device * If approved, Apple Support will assist in bypassing the activation lock **Way 3: iTunes Activation Lock Bypass** Restore your device to factory settings using iTunes: * Access a computer with iTunes installed * Connect your iPod Touch to the computer * Select "Restore" and follow prompts * Wait for the process to complete, then set up your device Getting rid of an iPod Touch's activation lock can be a hassle, but there are ways to do it. Here's one method: plug in your iPod Touch to a computer using a USB cable and open iTunes. Put your device into recovery mode by following the specific steps for your model. Once iTunes detects your device, you'll see options to restore or update. Choose "Restore" to wipe your device clean and set it up as new. Another way is to use DFU (Device Firmware Update) mode. This method involves using firmware files to bypass the activation lock without needing your Apple ID credentials. To do this, turn off your iPod Touch, press and hold the Power button for 3 seconds, then press and hold the Home button simultaneously for 10 seconds. Release the Power button but keep holding the Home button for another 5 seconds. If done correctly, iTunes will detect your device in recovery mode, and you can follow the prompts to restore it to factory settings. There are also third-party bypass tools available that claim to remove activation locks on iPod Touches and other iOS devices. However, some of these tools may not work as promised or could compromise your device's security. Use caution when exploring these options. In conclusion, dealing with an activation lock can be frustrating, but there are ways to overcome this obstacle and regain access to your device. Looking to bypass iCloud activation lock? Don't worry, we've got you covered! If you're stuck with a second-hand iPhone or iPad and can't reach the original owner, try these methods. First, contact Apple Support - they might just help you out. If that doesn't work, you can try DNS bypass. But be careful, not all devices will cooperate. Some online services claim to remove activation locks, but most of them are scams! So, what can you do? First, visit the Apple Activation Lock support page and follow the on-screen prompts. You'll need your email address, phone's serial number, IMEI, or MEID, and proof of purchase. Don't forget to check if restarting your device will help you get past the activation lock screen. Remember, Apple might deny your request if they think it's suspicious. And, as a last resort, try setting up your device again until you reach the Wi-Fi settings page. Good luck! **Bypass Activation Lock on iOS Devices** To bypass the activation lock on your iOS device: 1. **Choose Your Country and Language**: Start by selecting your country and language. 2. **Edit DNS Settings**: Tap the "i" button next to your desired network, then modify the DNS settings. Scroll down and select "Configure DNS," choosing the "Manual" option. 3. **Input New DNS**: Enter the new DNS address depending on your location: * North America: 104.154.51.7 * South America: 35.199.88.219 * Europe: 104.155.28.90 * Asia: 104.155.220.58 * Australia and Oceania: 35.189.47.23 4. **Connect to Network**: Tap the "Back" button, then select your edited Wi-Fi network and enter the password when prompted. 5. **Activate Device**: Tap the "Back" button again when the device tries to activate. If successful, you should be able to bypass the activation lock. Note that this method won't fully unlock your phone, and some features may not be available. The activation lock will reappear after restarting your device. This method might not work for all devices, especially newer iOS versions. **Alternative Methods**: Some apps require jailbreaking, which can leave your device vulnerable to security threats. Additionally, many services claiming to unlock your phone are scams. Be cautious and only accept help from trusted sources. Co-authored by wikiHow staff writer Hannah Dillon.
